

ZEPPELIN AT MEDICA 2016

On **November 14 - 17, 2016**, the world's biggest exhibition for medical equipment and medical architecture will take place in **Duesseldorf, Germany**.

ZEPPELIN MOBILE SYSTEME GmbH – one of the leading manufacturers of medical shelter systems – will again be exhibiting at this important event for the medical community. On stand no. FG05-04 and FG05-06 in the outdoor area in front of hall no. 5. ZMS will display two clinic systems.

The **ZEPPELIN Mobile Modular Hospitals**, the innovative and forward-looking medical diagnosis and treatment units are based on the special ZEPPELIN Modular Shelter. The shelter offers the working environment of a stationary hospital. ZEPPELIN Modular Shelter can be fitted with any type of medical equipment, as available in stationary hospitals. The equipment is specifically tailored to meet the high demands of modern medicine. **ZEPPELIN Mobile Modular Hospitals** are deployable, wherever primary medical care is needed. The units are delivered turnkey and ready for use in a very short time. On MEDICA this year, ZMS will present as a world novelty the **ZEPPELIN Mother-Child Clinic**. This clinic covers all medical requirements for a comprehensive care of mother and child: examination, ultrasound, operating theatre and obstetrics.

The second clinic is a **Mobile Computed Tomography** unit installed in a double-side extendable ZEPPELIN-Shelter®. Separate areas for the scan and the control room ensure safe operation.

The walls of the shelter and the control room are leadshielded by means of a special sandwich-wall-structure. Due to its smart design, the shelter can be easily set up.

The CT system uses a patented turn-table which allows set up within 15 minutes (incl. removing the mobile kit, rotating the table and system start up – no time-consuming recalibration of the scanner needed).

We are looking forward to welcoming you at our booth at MEDICA 2016
